PROFILE

Frontend developer with a completed 9-month training programme at cimData. I moved into software development from music production and civil engineering, and I bring the creativity, technical thinking and hands-on project experience that came with that. I build clean, accessible web applications with React, Next.js and TypeScript. Right now I'm extending my stack towards fullstack with Python, PostgreSQL and AWS. Six projects, all live with source code, are at marcelfelder.vercel.app/en; the site itself is built with Next.js 15, React Three Fiber and the Web Audio API.

SELECTED PROJECTS

SolarSurge · Fullstack Energy Dashboard + Mobile App

2026

github.com/MarcelFelder-git/solarsurge · Live: solarsurge-web.vercel.app

- Fullstack project: web dashboard and mobile app that recommend pre-cooling the flat when there's surplus solar power. Bilingual (DE/EN), live updates, honest labelling of real versus simulated data.
- pnpm monorepo with a Next.js dashboard (App Router, Recharts), an Expo/React Native app and a Python data pipeline (AWS Lambda, Open-Meteo API). PostgreSQL with Prisma, types shared across all apps.
- AWS infrastructure as code (CDK with EventBridge, Lambda, RDS, SNS). Runs on Vercel and Neon, hourly pipeline via GitHub Actions, core logic covered by 23 pytest unit tests.

Latent · Film emulation in the browser, entirely on the GPU

2026

github.com/MarcelFelder-git/Latent · Live: latent-mu-nine.vercel.app

- Characteristic curves per colour layer, wavelength-dependent halation, grain and scanner profiles in five WebGL2/GLSL passes. No backend, nothing gets uploaded; installs as a PWA and works offline. TypeScript, React, Vite, Web Worker / OffscreenCanvas.

Aurora · Cycle-tracking PWA for two people

2026

github.com/MarcelFelder-git/aurora-app · Live: aurora-app-pied.vercel.app

- Two views synced live via Supabase Realtime, access scoped per couple with Row Level Security, Web Push (VAPID), Service Worker. Next.js 14, TypeScript, Tailwind CSS.

AUFMISCHEN · Portfolio for a music producer (commissioned)

2026

github.com/MarcelFelder-git/next-aufmischen_portfolio_v02 · Live: next-aufmischen-portfolio-v03.vercel.app

- Headless architecture with Sanity CMS: the client updates music, tour dates and bio herself, no deploy needed. Next.js, Framer Motion, React Hook Form + Zod. More projects (NxtVideoGameHUD, Art Robbery) on GitHub.

Built pair-programming with AI tools (Claude Code); architecture, data model and sign-off on every change are mine.

EXPERIENCE

Freelance Musician & Sound Engineer

11/2010 – 06/2023

- Music production, mixing and mastering, studio and live guitarist, and live sound engineering for a range of venues.
- Tour and project management, client support and administration. I planned projects with many people involved independently and delivered them on schedule.

Working Student, Civil Engineering

11/2015 – 04/2022

- Structural calculations, construction drawings and building applications, along with client consultation and project coordination.

Internship, Online Editorial

10/2010 – 05/2011

- Website content, SEO, online publishing and management of the social media channels.

EDUCATION

Frontend Developer Training · cimData, Berlin

10/2024 – 08/2025

- HTML, CSS, JavaScript, React, Next.js, TypeScript, Python fundamentals and accessibility.

Civil Engineering · Berlin University of Applied Sciences (BHT)

04/2014 – 09/2022

- Focus areas: structural design, construction and project management.

Audio Engineering · Deutsche Pop Academy

10/2008 – 10/2011

- Recording, mixing, mastering and songwriting.

Abitur (secondary school leaving certificate) · Hedwig-Bollhagen-Gymnasium, Velten

2007

SKILLS

Frontend: React, Next.js (App Router), TypeScript, JavaScript, HTML, CSS, accessibility, Recharts

Backend & Data: Python, PostgreSQL, Prisma, REST APIs, pytest (basics)

Cloud & Tools: AWS basics (Lambda, CDK, EventBridge), Vercel, GitHub Actions, Git/GitHub, pnpm, Docker (basics), Figma, VS Code

Languages: German (native), English (fluent)
